Please find below and/or attached an Office communication concerning this application or proceeding.

U.S. Patent and Trademark Office PTOL-326 (Rev. 7-05)

Paper No(s)/Mail Date

2) Notice of Draftsperson's Patent Drawing Review (PTO-948)

3) Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)

Paper No(s)/Mail Date.

6) U Other:

5) Notice of Informal Patent Application (PTO-152)

Art Unit: 3725

DETAILED ACTION

Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - Claims 1-8, drawn to a method of slicing, classified in class 83, subclass
 43.
 - II. Claims 9-17, drawn to a method for changing cutting speed, classified in class 83, subclass 311.
 - III. Claims 18-24, drawn to an apparatus for sorting work-pieces, classified in class 83, subclass 27.
 - IV. Claims 25-29, drawn to a method of transporting potatoes, classified in class 83, subclass 436.6.
 - V. Claims 30-35, drawn to an apparatus for removing food from a flume of water, classified in class 209, subclass 162.
 - VI. Claims 36-40, drawn to a method of reducing the minor dimension of a food item, classified in class 83, subclass 44.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions have completely different effects since I is a method of slicing, and II is a method of adapting a rotational speed.

Application/Control Number: 10/701,529 Page 3

Art Unit: 3725

3. Inventions I and III are unrelated. Inventions are unrelated if it can be shown that they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions have completely different effects since I is a method of slicing, and III is an apparatus for sorting work pieces.

- 4. Inventions I and IV are unrelated. Inventions are unrelated if it can be shown that they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions have completely different effects since I is a method of slicing, and IV is a method of transporting potatoes.
- 5. Inventions I and V are unrelated. Inventions are unrelated if it can be shown that they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions have completely different effects since I is a method of slicing, and V is an apparatus for removing food from a flume.
- 6. Inventions I and VI are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because I does not require orientation of potatoes. The subcombination has separate utility such as orienting foods.
- 7. Inventions II and III are unrelated. Inventions are unrelated if it can be shown that they they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions have completely different

Art Unit: 3725

effects since II is a method of adapting a rotational speed and III is an apparatus for sorting work pieces.

- 8. Inventions II and IV are unrelated. Inventions are unrelated if it can be shown that they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions have completely different effects since II is a method of adapting a rotational speed and IV is a method of transporting potatoes.
- 9. Inventions II and V are unrelated. Inventions are unrelated if it can be shown that they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions have completely different effects since II is a method of adapting a rotational speed and V is an apparatus for removing food from a flume.
- 10. Inventions II and VI are unrelated. Inventions are unrelated if it can be shown that they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions have completely different effects since II is a method of adapting a rotational speed and VI is a method of reducing the minor dimension of a food item.
- 11. Inventions III and IV are unrelated. Inventions are unrelated if it can be shown that they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions have completely different effects since III is an apparatus for sorting work pieces and IV is a method of transporting potatoes.

Application/Control Number: 10/701,529 Page 5

Art Unit: 3725

12. Inventions III and V are unrelated. Inventions are unrelated if it can be shown that they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions have completely different effects since III is an apparatus for sorting work pieces and V is an apparatus for removing food from a flume.

- 13. Inventions III and VI are unrelated. Inventions are unrelated if it can be shown that they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions have completely different effects since III is an apparatus for sorting work pieces and VI is a method of reducing the minor dimension of a food item.
- 14. Inventions IV and V are unrelated. Inventions are unrelated if it can be shown that they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions have completely different effects since IV is a method of transporting potatoes and V is an apparatus for removing food from a flume.
- 15. Inventions IV and VI are unrelated. Inventions are unrelated if it can be shown that they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions have completely different effects since IV is a method of transporting potatoes and VI is a method of reducing the minor dimension of a food item.
- 16. Inventions V and VI are unrelated. Inventions are unrelated if it can be shown that they have different designs, modes of operation, and effects (MPEP § 802.01 and §

Art Unit: 3725

806.06). In the instant case, the different inventions have completely different effects since V is an apparatus for removing food from a flume and VI is a method of reducing the minor dimension of a food item.

- 17. Because these inventions are independent or distinct for the reasons given above, the inventions require a different field of search (see MPEP § 808.02) and have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.
- 18. This application contains claims directed to the following patentably distinct species:
 - a. The embodiment disclosed in figures 2 and 3.
 - b. The embodiment disclosed in figure 6.
 - c. The embodiment disclosed in figures 1a and 1b.
 - d. The embodiment disclosed in figures 7a and 7b.
 - e. The embodiment disclosed in figures 7c and 7d.
 - f. The embodiment disclosed in figures 7g and 7h.
 - g. The embodiment disclosed in figures 8a 8d.
 - h. The embodiment disclosed in figure 9.
 - i. The embodiment disclosed in figures 10a and 10b.
 - j. The embodiment disclosed in figures 11a and 11b.
 - k. The embodiment disclosed in figures 13 and 14.

Art Unit: 3725

The species are independent or distinct because they depict different inventions. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claims are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species.

MPEP § 809.02(a).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sean M. Michalski whose telephone number is 571-272-6752. The examiner can normally be reached on M-F 7:30AM - 3:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Derris Banks can be reached on 571-272-4419. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
